❖ **Test Automation**

1. Visit https://useinsider.com/ and check Insider home page is opened or not
2. Select the "Company" menu in the navigation bar, select "Careers" and check Career page, its Locations, Teams, and Life at Insider blocks are open or not
3. Go to https://useinsider.com/careers/quality-assurance/, click "See all QA jobs", filter jobs by Location: "Istanbul, Turkey", and Department: "Quality Assurance", check the presence of the job list
4. Check that all jobs' Position contains "Quality Assurance", Department contains "Quality Assurance", and Location contains "Istanbul, Turkey"
5. Click the "View Role" button and check that this action redirects us to the Lever Application form page

> ***Requirements*:**
> ➔ A test case should be written using any programming language and framework (Python or Java + Selenium would be preferable)
> ➔ No BDD(Cucumber, Quantum, Codeception, etc.) frameworks are allowed
> ➔ The screenshot should be taken if the test fails one of the steps
> ➔ The test case should be able to run in Chrome and Firefox browsers and ensure that the browser is parametrically changeable.
> ➔ Test code should fully meet POM requirements

❖ **Load test**

Load tests and scenarios are needed to investigate the behavior of the search module of the https://www.n11.com/ header and list the results after the search

> ***Requirements:***
> ➔ Write test scenarios for the relevant situation
> ➔ Code scenarios using JMeter or Locust (1 user is enough)

❖ **Test Automation - API**

Using "pet" endpoints from https://petstore.swagger.io/ write CRUD operations API tests with positive and negative scenarios.
